

Use of environmental spend analysis in a purchasing organization

Webinar: Fossil-Free and Circular Procurement

Peter Nohrstedt, Sustainability Manager Adda

2023-11-09

Our starting points and our approach

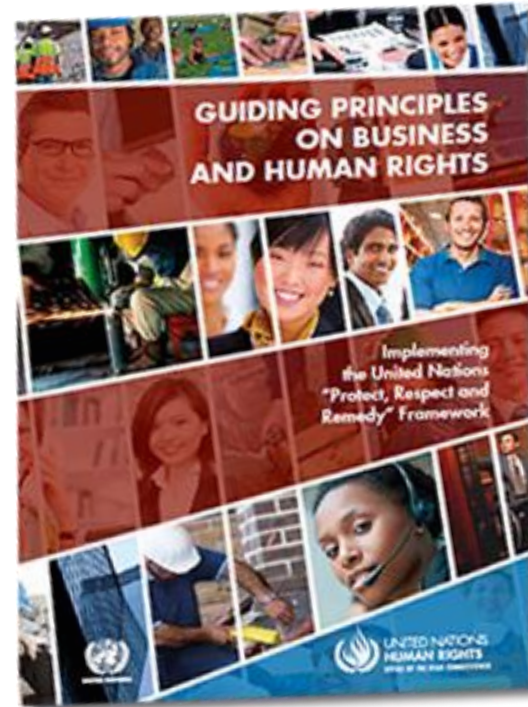

GLOBALA MÅLEN
för hållbar utveckling

We strive to set sustainability requirements in all our procurements and dynamic purchasing systems where it is relevant, based on the risk of negative impact and the potential for development.

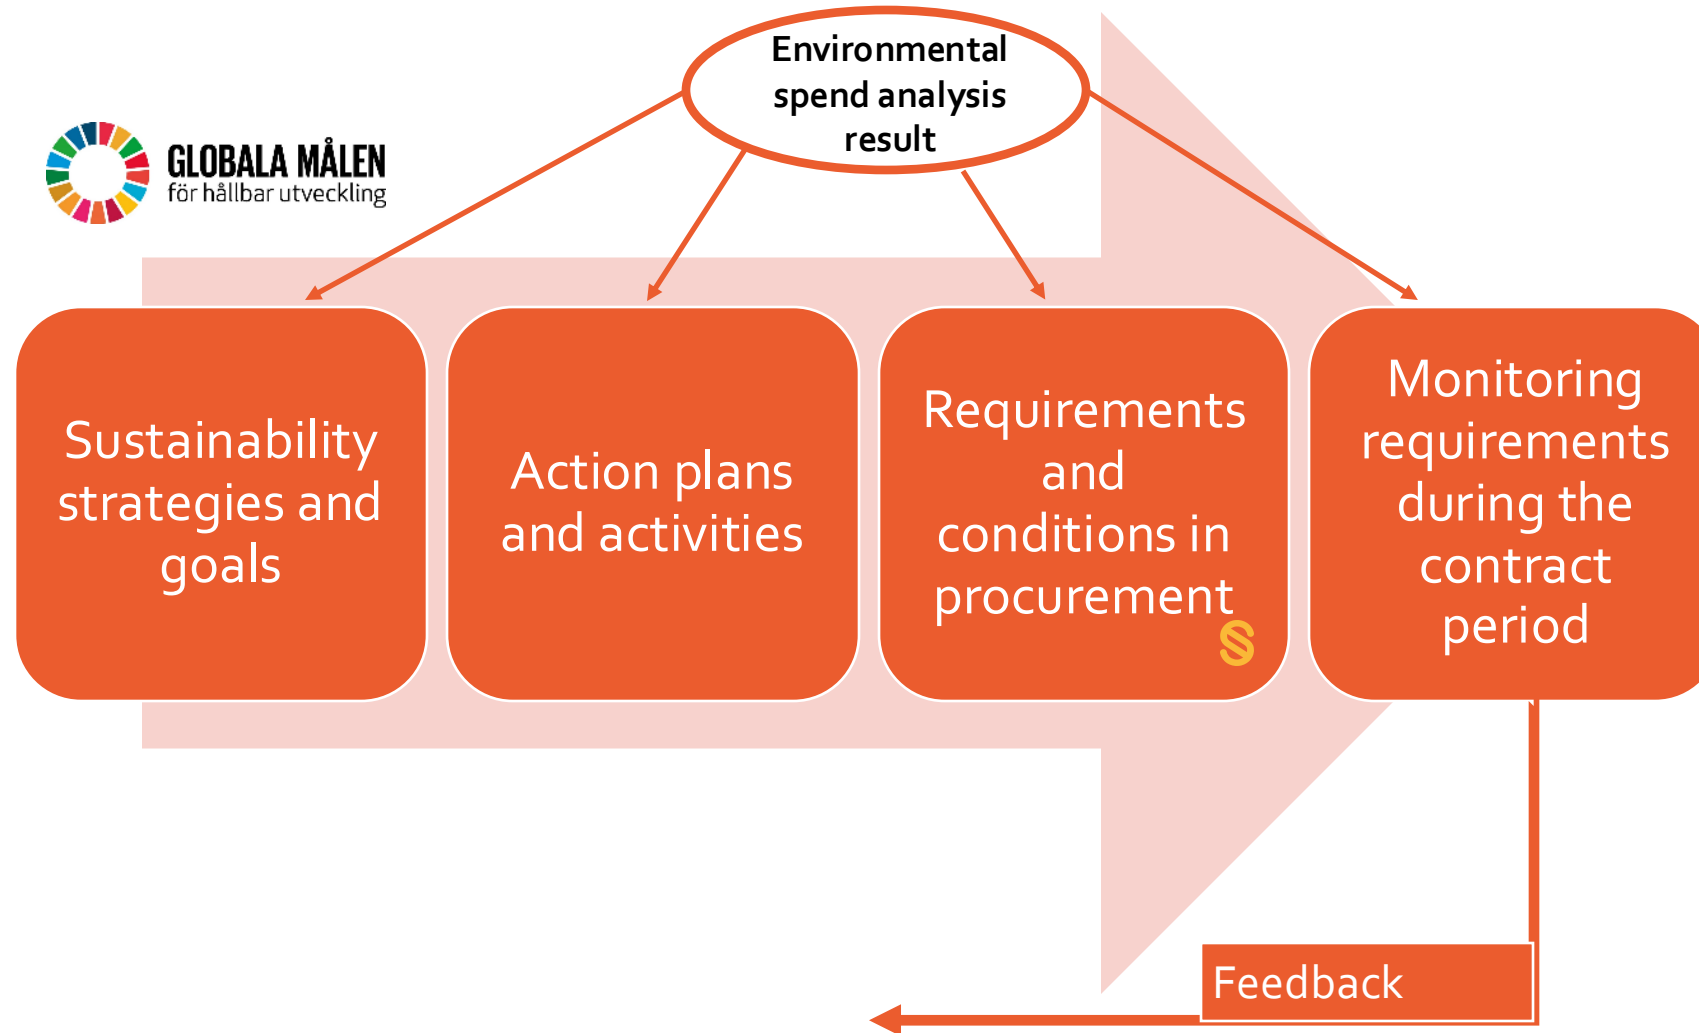

GLOBALA för hållbar

Principles for Sustainable Procurement

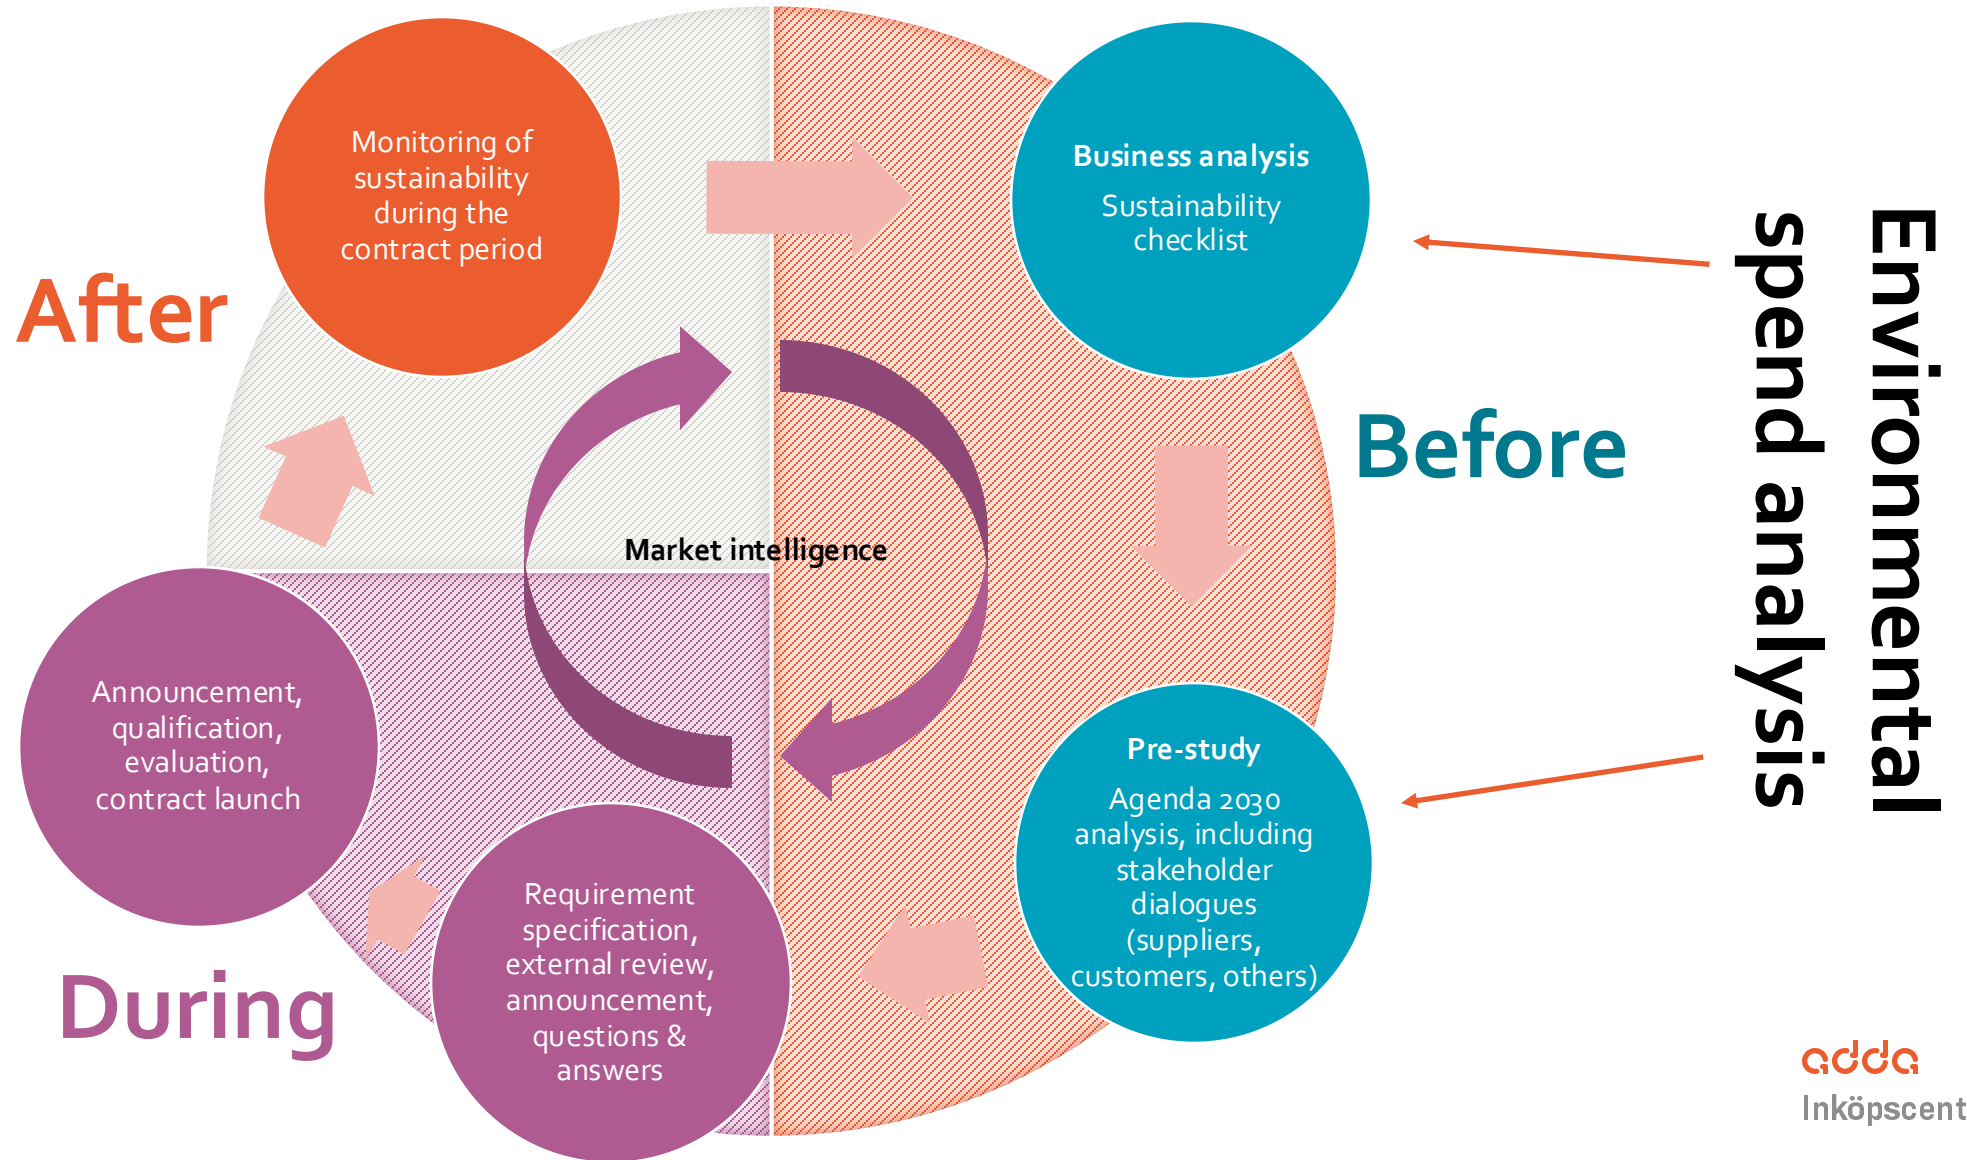

PARIS2015

How to Translate Goals and Strategies into Procurement Requirements**

Sustainability in the Procurement Process

Agenda 2030-analysis

GLOBALA MÅLEN
för hållbar utveckling

<https://www.adda.se/hallbarhet>

1. Children's rights in procurement
2. Labor law conditions according to collective agreement
3. Working environment
4. Employment promotion measures
5. Equal rights and opportunities
6. Accessibility and the needs of all users

7. Sustainable supply chains
8. Sustainable investments

9. Circular economy
10. Climate impact
11. Natural resources, biodiversity and ecosystems
12. Substances harmful to the environment and health
13. Systematic environmental work

14. Animal care

15. Economical crime
16. Information security

Social issues with a focus on the situation in Sweden, even if children's rights in procurement function as an umbrella for all issues

International issues that span all four parts of the UN Global Compact

Environmental issues, which are considered from a life cycle perspective, and animal care

Questions with a focus on social impact

What is the Agenda 2030 analysis based on?

Method

- UN Guiding Principles for Business and Human Rights
- OECD Due Diligence Guidelines for Responsible Business
- Coop's sustainability declaration – purchasing tool from the start

The material

- Environmental spending analysis
- The National Agency for Public Procurement's guidelines
- Other guidelines, such as MSB, DIGG, IMY, etc.
- Statistics Norway, the Swedish Work Environment Authority's occupational injury statistics, etc.

Spider diagram and severity assessment

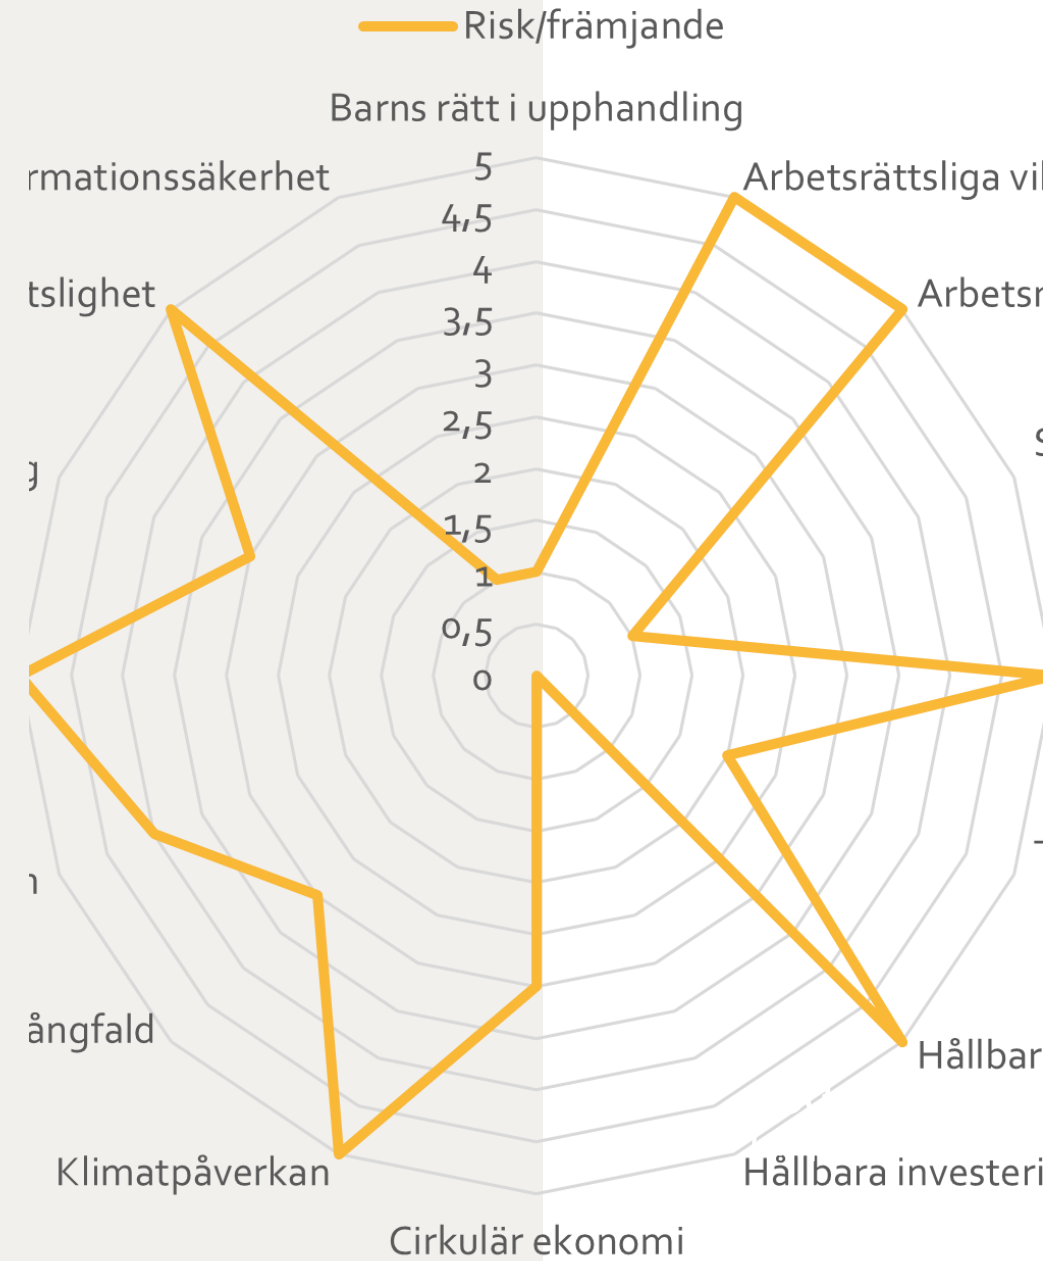

All aspects with **3-5 points** should or must be required, depending on whether it is a requirement according to the LOU.

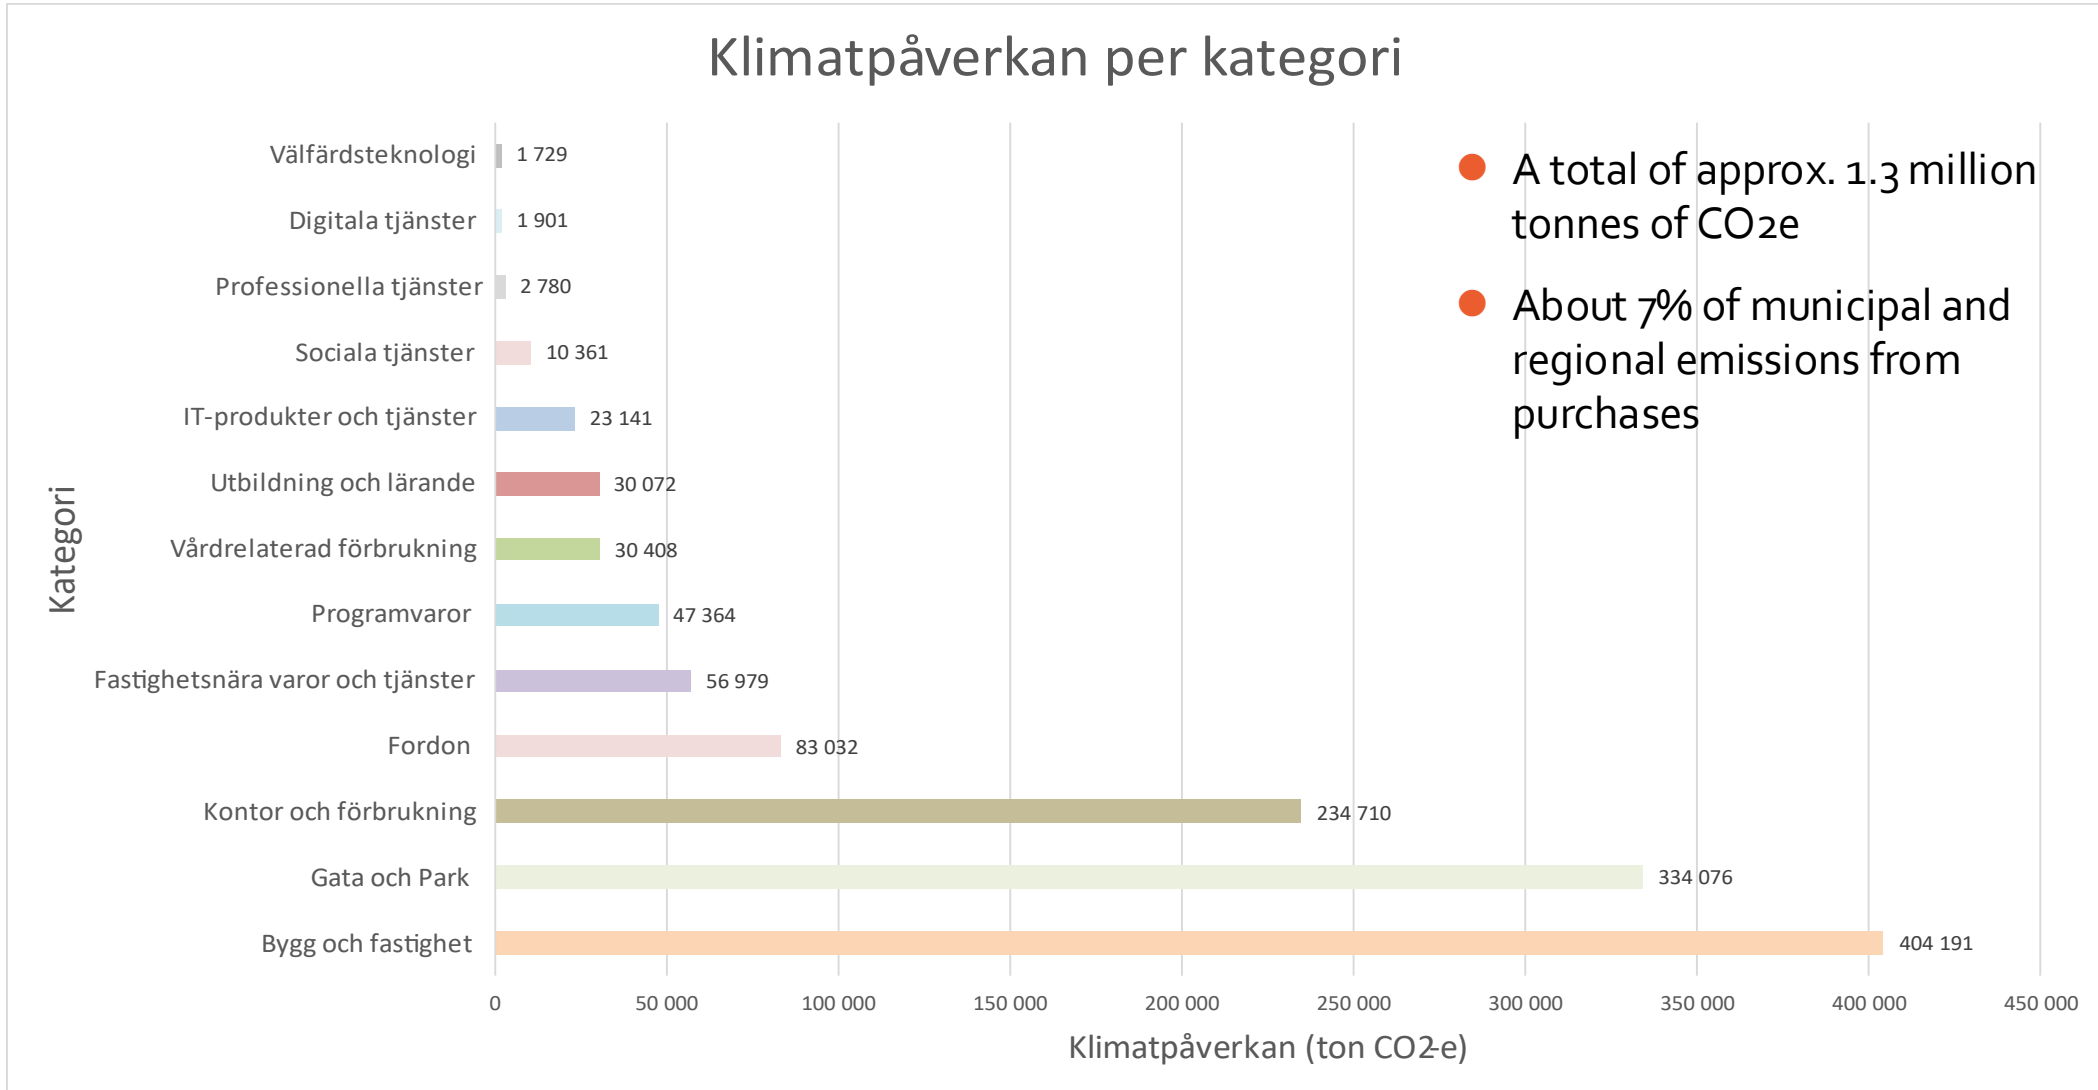

These aspects are also scored based on **seriousness** (importance, scope and whether the negative impact can be corrected), which leads to a priority to be used when setting requirements and follow-up.

Risk Assessment Climate

Basis of assessment (for environmental spending analysis)	Risk score
Construction, energy, food, fuel ..	5
IT hardware, furniture, kitchen equipment, work clothes..	4
Craftsmanship services, installations, alarms and surveillance, office supplies...	3
Medicines and pharmacy goods, social services and care activities	2
Technical consultants, IT consultants, operational staffing, PR, advertising and information...	1

Environmental spending analysis on Adda's framework agreement portfolio (2021)

Hållbarhetsrapport 2022

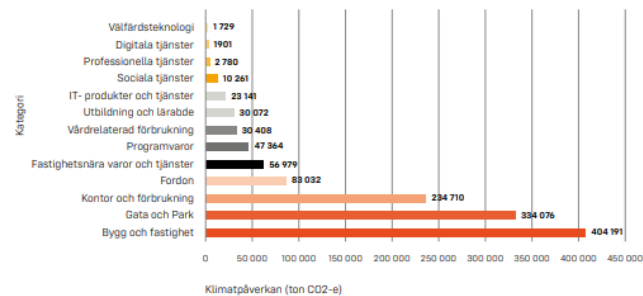

Miljöspendanalys

Under året genomförde IVL, Svenska miljöinstitutet på uppdrag av oss en miljöspendanalys av Inköpscentralens portfölj. En miljöspendanalys är en inköpsanalys där olika miljöfaktorer har integrerats. Det gör det möjligt att undersöka den miljö- och klimatpåverkan som uppstår till följd av inköp, men också se vilken och hur stor miljöpåverkan olika typer av inköp har i relation till andra typer av inköp. För vår del analyserades enbart klimatpåverkan från våra ramavtal och dynamiska inköpsystem.

Tabellen nedan visar att vår klart största klimatpåverkan kommer från kategoriområdena Bygg och fastighet, Gata och park samt Kontor och förbrukning. Resultaten från miljöspendanalysen ska inte tolkas som absoluta sanningar då det finns osäkerhet inbyggt i modellen, men det ger en fingervisning om vad som är stort och smått i sammanhanget.

Klimatpåverkan per kategori

Thank you!
